

 An introduction to
Compostable
bags and films

Compostable bags and films are becoming an increasingly popular packaging alternative. Here are 4 things you should know:

01

Compostable films harmlessly break down into non-toxic organic compost within about 6 months.

02

 75%

California's 75 Percent Initiative calls for an increase in compostable production.

03

Components of the bag must be compostable or comprise less than 1% of total volume.

04

Compostable films must meet the stringent ASTM D6400 specifications.

Great American Packaging's Compostable Eco-Film:

- Meets ASTM D6400 specifications
- Opaque and clear options
- Freezer safe down to -30° F
- Great sealability and tear resistance
- Approved for food contact
- Superior off-gassing properties
- Printable
